

## G185 Wire, Fiber and Rope Grips

Rated to 20 or 50 kN (4500 or 11000 lbs)

Cord, wire, rope and wire rope tests require special grips to reduce breakage in the grip area. G185 air clamped grips distribute the contact stress over the extended length of the test sample and feature air driven operation that both facilitates a faster gripping process and allows constant and adjustable clamp load to manage the clamp load on the wire, fiber or rope.

- Rated Capacity 20 or 50 kN (4500 or 11000 pounds)
- Serrated jaw clamp surface (other surfaces optional)
- Adjustable clamp force

### Adapters

The grip is attached to a universal test system using standard quick attach adapters with dowel pins.

### Air Kit

You may choose from a hand or foot operated air supply. See G205 Air Kits.
