

## **G50-D2861 Standard Peel Test Fixture per ASTM D2861**

*Peel Strength Test Device Requirements* – ASTM D2861 specifies test fixtures for determining the peel strength of materials made of copper foil and dielectric film or treated fabrics. The G50-D2861 fixture meets these requirements.

Flexible composites generally require more elaborate means for proper support during peel testing than do rigid, copper-clad laminates. As specified in the standard, the peeling mechanism is capable of peeling copper for the dielectric at an angle of 90 degrees to the specimen.

**G50 Test Fixtures are made to order per exact ASTM requirements**
